EVE

Environmental Vessel Efficiency

Pole Star's Environmental Vessel Efficiency (EVE) application monitors and reports your fuel consumption data to help you comply with EU and IMO environmental regulations.

polestarglobal.com/EVE

Pole Star's Environmental Vessel Efficiency (EVE) module is built on the powerful **Pole Star Platform**, ensuring unmatched accuracy, security and simplicity of use.

A free-to-download onboard app, EVE uses sophisticated algorithms to measure and **report fuel consumption data**, evaluating **vessel performance** with no requirement for the installation of expensive or complex equipment.

Environmental responsibility is a priority for the IMO, and the shipping industry is actively engaged in trying to reduce its carbon footprint.

Pole Star are proud to serve our customers with a solution that helps them **comply with environmental regulation** such as MRV and IMO DCS, and - just as importantly - the data-driven analysis needed to reduce fuel consumption and **improve profit margins**.

Monitor

EVE tests vessel performance by measuring your fuel consumption. It satisfies the MRV regulation and will scale up as legislation evolves.

Report

Onboard validation syncs seamlessly for shore side data aggregation. Voyage, time period or annual reports are produced at your convenience.

Save

Increased efficiency measures can be implemented based on actionable intelligence.
